## **Snom Unveils New Wireless SIP Conference Phone**

*Snom C620 wireless conference phone designed to bring freedom and flexibility to businesses of all sizes*

**TIGARD, Ore., May 18, 2020** – Today, Snom (a wholly-owned subsidiary of VTech Holdings Limited), a pioneer and a leading brand of professional and enterprise VoIP phones, expanded its diverse portfolio of telecommunication products with the release of the Snom C620 Wireless SIP Conference Phone. Built with DECT 6.0 technology, the new conference phone is fully wireless, enabling flexible placement and usage of the phone in the workplace without the clutter of cumbersome wires. Complete with HD voice quality, up to 24 hours of talk time on a single charge and two wireless mics, the new system ensures business users can experience less frustration and more successful conference calls.

“Businesses of all sizes can benefit from going wire-free for conference calls,” said Brian Tompkins, vice president of sales, VTech Communications Inc. “A significant benefit is that no modifications need to be made to a conference room to accommodate wires during installation, such as drilling holes in a conference table. In addition to freeing up table clutter and improving productivity, the latest solution from Snom has all the features you’d expect in a high-quality conference phone with the added benefit of cordless freedom.”

The C620 is equipped with a SIP DECT base and docking station to charge the phone with up to 24 hours of talk time, ensuring that users will never run out of battery during an important call. The base can be up to 150 feet away from the conference phone itself, allowing total freedom for placement of the device in your conference room—without tripping over wires. And with two DECT 6.0 wireless mics that charge directly in the phone’s built-in charging bays, employees can move freely and collaborate beyond the conference table without having to raise their voice to be heard, all while maintaining HD voice quality. If expanded coverage in a large meeting room is necessary, up to two C52-SP SIP DECT expansion wireless speakerphones can easily be added to accommodate more active participants or a larger meeting space. Team members in businesses of any size can now spread out, hear clearly and speak without shouting, all without wires getting in the way.

The solution also comes with support for up to three SIP lines, making it easy to manage multiple calls with advanced call handling features like 10 speed dial entries and 3-way conferencing. With a user-friendly interface, large backlit display and navigational pad, business users have an intuitively designed wireless solution to meet any conference call needs.
